DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

2. Claims 1-10 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Makhonine in view of Bell .

Makhonine shows all the details of fuel balancing in the wing to alleviate wing loads except for the automatic control. Makhonine in the second paragraph of col 2 teaches that the fuel is transferred to the outboard tank after take off and back to the inboard tank before landing. Bell teaches as is well known that things which may be done manually can be made to automatic through the use of computers. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the fuel balancing system of Makhonine automatic as taught in general by Bell.

3. Applicant's arguments filed Oct. 9, 2001 have been fully considered but they are not persuasive. Makhonine in col 2 second paragraph describes the steps set forth by applicant but without the automatic action and this has long been held to be an obvious

modification. The pilot senses that the plane takes off and transfers the fuel and he senses when the plane is going to land (approaching the destination) and transfers the fuel and to provide some automatic means to do, this is merely the use of modern technology.

In re Venner , 262 F.2d 91, 120 USPQ 193, 194 (CCPA 1958) (Appellant argued that claims to a permanent mold casting apparatus for molding trunk pistons were allowable over the prior art because the claimed invention combined "old permanent - mold structures together with a timer and solenoid which automatically actuates the known pressure valve system to release the inner core after a predetermined time has elapsed." The court held that broadly providing an automatic or mechanical means to replace a manual activity which accomplished the same result is not sufficient to distinguish over the prior art.).

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
